- <sup>2</sup> Institute of Fluid Dynamics and Technical Acoustics, Technische Universität Berlin, Müller-Breslau-Str. 8, 10623 Berlin, Germany

## PB EMPIR project "Multiphase flow reference metrology"

### The challenge:

- Over half of the world's energy needs are satisfied by oil & gas.
- On extraction, well fluids are measured with multiphase flow meters.
- Uncertainties in the field can be larger than 20%.

## **Central objective:**

To explain and reduce the uncertainty in multiphase flow metering

Numerical simulation, validation, and analysis of two-phase slug flow in horizontal pipes

## PTB EMPIR project "Multiphase flow reference metrology"

glass viewing section

### **Experimental comparison:**

- Multiphase measurements in different flow loops
- Using the same transfer package

## *D* = 0.104 m **CFD simulations:**

- Model pattern formation in inflow section
- Investigate influence of parameters on dp measurement

#### Physikalisch-Technische Bundesanstalt Braunschweig und Berlin

### Two-phase flow (oil / water – gas):

#### Physikalisch-Technische Bundesanstalt Braunschweig und Berlin

Numerical simulation, validation, and analysis of two-phase slug flow in horizontal pipes

### **Material parameters:**

|                               | Nitrogen                | Paraflex oil            | Water                   |
|-------------------------------|-------------------------|-------------------------|-------------------------|
| Density in kg m <sup>-3</sup> | 10.8                    | 815.8                   | 1011                    |
| Dyn. visc. in Pa s            | 1.75 · 10 <sup>-5</sup> | 7.84 · 10 <sup>-3</sup> | 8.82 · 10 <sup>-4</sup> |

### **Superficial velocities:**

| Superficial vel. in m/s | Nitrogen | Paraflex oil | Water |
|-------------------------|----------|--------------|-------|
| Test case 01            | 7.063    | 0.294        | -     |
| Test case 77            | 7.063    | -            | 0.294 |
| Test case 03            | 1.399    | 1.144        | -     |
| Test case 79            | 1.399    | -            | 1.144 |
| Test case 05            | 0.545    | 1.635        | -     |
| Test case 81            | 0.545    | -            | 1.635 |

## PB Simulation results for selected test cases

## Liquid level (mean ± standard deviation):

- Increase of liquid level with increasing liquid superficial velocity
- Good agreement between experiment and simulation for mean liquid level (except for TP 77)
- Standard deviation in simulation smaller than in experiment

#### Physikalisch-Technische Bundesanstalt Braunschweig und Berlin

Numerical simulation, validation, and analysis of two-phase slug flow in horizontal pipes

### **Five dominant frequencies of FFT:**

Increase of dominant frequencies with increasing liquid superficial velocity

Physikalisch-Technische Bundesanstalt 
Braunschweig und Berlin

Numerical simulation, validation, and analysis of two-phase slug flow in horizontal pipes

### Summary:

- Simulation of different slug flow test cases
- Validation of CFD models by comparison with experimental data
  - $\rightarrow$  good agreement for average liquid level (except for TP 77)
- Frequency analysis of experimental and simulation data

### Summary:

- Simulation of different slug flow test cases
- Validation of CFD models by comparison with experimental data
  - $\rightarrow$  good agreement for average liquid level (except for TP 77)
- Frequency analysis of experimental and simulation data

## **Outlook:**

 Further analysis of results by POD to identify structures that are characteristic for a specific pattern

## $\rightarrow$ Talk by Marc Olbrich on Friday
